Delft, Netherlands

RESEARCH STATEMENT

I study human movement through the lens of robotics, biomechanics, and sensorimotor neuroscience. My work explores how the nervous system interacts with the body and environment to generate skilled, adaptable behavior. Using tools such as a robotic balance simulator, I investigate how humans learn altered control dynamics, ranging from small perturbations to the complete reversal of postural control. In parallel, I use musculoskeletal models to simulate and measure the energetic cost of human posture and gait, aiming to determine whether simple models accurately describe human movement and physiology. In other applied work, I developed a dynamic model of a wheelchair that could be pushed from the side for improved social interaction. By examining motor control from a dynamic systems perspective, I aim to uncover fundamental principles in biological or engineered systems that enable us to move with intelligence and purpose.

Research interests: Cost functions that define human movement, Model-based hypotheses for how the brain realizes intelligent control, Morphological and reservoir computing applied to sensorimotor neuroscience, Biomechanical/Multibody simulations, Learning and adaptation in biological and engineered systems.

EDUCATION

• PhD Candidate Sensorimotor Neuroscience and Biorobotics

Erasmus MC

Feb 2022 - Feb 2026

Rotterdam, Netherlands 

- Dissertation (in preparation): Optimality of the human balance controller: the biomechanical and neural principles that define how we stand.
- Design human subject experiments using a robotic balance simulator and various methods such as optical motion capture, electric vestibular stimulation, and indirect calorimetry.
- Write scientific papers (PNAS, J. Physiol) and present work at various conferences on neuroscience and movement control.
- Teach and supervise students at internship, BSc, and MSc levels.
- For a list of projects (including unpublished ones), see [my website](#).

• MSc Mechanical Engineering (BioMechanical Design)

Delft University of Technology

Sep 2019 - Jan 2022

Delft, Netherlands

- Grade: 8.1
- Dissertation: [The Dynamics of Non-upright Castor Wheels and Their Application for Pushing Wheelchairs from the Side](#)

• BSc Exchange Semester

University of Michigan - Shanghai Jiao Tong University Joint Institute

2018 - 2019

Shanghai, China

- Grade: 9.0 (Cum Laude)
- Courses on engineering optimization and biomedical instrumentation design.

• BSc Mechanical Engineering

Delft University of Technology

2016 - 2019

Delft, Netherlands

- Grade: 8.0 (Cum Laude)

PROJECTS

- **Wheelchair Design for Improved Social Interaction** Sep 2020 - Sep 2024
Ziggy Mobility, Rijndam Rehabilitation, Erasmus MC, and Delft University of Technology Delft, Netherlands [🌐]
 - Investigated the use of a modified castor wheel to enable pushing a wheelchair from the side by developing a 3D multibody model of the wheelchair and castor wheel.
 - Work directly contributed to the founding of the startup [Ziggy Mobility](#).
 - Co-inventor on the resulting [patent for Dutch jurisdiction](#).
 - Published the study in [PLOS ONE](#) as the first and corresponding author.
- **Lead Experimentation for Development of Mechanical Ventilator** May 2020 - Aug 2020
Project Inspiration and Delft University of Technology Delft, Netherlands [🌐]
 - Worked on the development of rapidly manufacturable ventilator system for COVID-19 patients with impaired breathing.
 - Tested the device according to the UK emergency ventilator standards.
 - Designed modification for the device to reduce peaks in inspiratory pressure.

PROFESSIONAL EXPERIENCE

• Student Engineer

Tromp Bakery Solutions

Apr 2019 - Feb 2020

Gorinchem, Netherlands [🌐]

- Inspected production lines and CAD models to document potential hazards and proposed solutions following ISO norms.
- Performed statics calculations to automatically recommend gas spring parameters for production lines.

• Student Computer Aided Design Drafter

Nidec Netherlands

Aug 2017 - Sep 2017 & Mar 2019 - Jan 2020

Slidrecht, Netherlands [🌐]

- Created assembly manual using SolidWorks models for high-power freestanding drives.
- Created CAD drawings and animations of multi-motor drive solutions (electric or electric-diesel hybrid) for maritime vessels.

TEACHING AND SUPERVISION EXPERIENCE

• Course development for NeuroRobotics 2026 (Research Master Neuroscience)

Erasmus MC, Mario Negrello

Apr 2026

[🌐]

- Contribute to the development of the first edition of the NeuroRobotics course.
- Teach introductory lectures on Kinematics, Dynamics, Control, and Optimization, and guide workshops for building simple robotic systems.

• Teaching Assistant Rigid Body Dynamics (BSc Mechanical Engineering)

TU Delft, Heike Vallery

Sep 2020 - Jan 2022

[🌐]

- Full-time teaching assistant for the second-year Mechanical Engineering course Rigid Body Dynamics for the academic years of 2020/2021 and 2021/2022.
- Developed Python code for automatically scheduling and grading weekly on-site tests for >600 students.

• BSc Medicine (Various courses)

Erasmus MC, Johan Pel and Patrick Forbes

2022-2026

- Practicals for courses on Exercise physiology, Blood circulation, Biomechanics, Echo, and Eye movements.

• Musculoskeletal Modeling and Simulation (MSc Mechanical Engineering, ME41006)

TU Delft, Ajay Seth

2023-2024

- Mentor for eight student groups on proposed project "The effect of subject-specific parameters on standing balance outcomes."

• Guest lectures

Erasmus MC and TU Delft

- Erasmus MC, NeuroAI: The Computing Brain Minor 2024 and 2025 (Organizer: Mario Negrello): What does it mean to move?
- TU Delft, Programming Foundations 2024 and 2025 (NB1035, Organizer: Nina Šoštarić): Automating experimental analysis using scientific programming
- Erasmus MC, Research Master Neuroscience 2025 (Organizer: Gerard Borst): Introduction to the vestibular system
- Erasmus MC, Nanjing University (NJU) Summer School 2024 (Organizer: Zhenyu Gao): Optimality and energy expenditure in standing and walking
- 4 Internal department talks for the Erasmus MC Neuroscience Department

• Supervision

Erasmus MC and TU Delft

- 6 MSc projects (Martin Gregorio, Luna Compen, Ben Rupprecht, Ralf Rienks, Daphne Onderwater, and Yomna Asar)
- 2 Internship projects (Daphne Onderwater, Timo Vanderhave)
- 2 Honors projects (Paul de Jongh, Job Sesink)
- 3 BSc Final projects (Nikki van Aerts, Job Sesink & Emma Schippers & Marieke Vassen, Inez Miedema & Valentijn Sohier)

ACADEMIC SERVICE

• Peer Reviewer

Various journals

- [PLOS ONE](#) Reviewed 1 publication and its revised version.
- [Royal Society Interface](#) Co-reviewed 1 publication and its revised version.

• Conference Moderator

IEEE/ASME International Conference on Advanced Intelligent Mechatronics (AIM 2021)

Jul 2021

- Moderator for virtual parallel sessions; introduced speakers and facilitated general discussion after presentations.

MEDIA COVERAGE

• How we maintain balance turns out to be more complex than thought

Aug 2024

Featured on [Amazing Erasmus MC](#)

HONORS AND AWARDS

• Editor's choice

The Journal of Physiology

May 2025

- Our paper was selected as Editor's choice and featured on the cover of The Journal of Physiology (Volume 610, Issue 10).

• Finalist Young Medical Delta Thesis Awards 2022

Young Medical Delta

Oct 2022

- Presented work among three other finalists competing for the best MSc Thesis award.

• Fonds Bemolt Scholarship 2018

Stichting Fonds Bemolt

2018

- Awarded to excelling students from Dordrecht pursuing scientific education abroad.

SKILLS

- **Experimental Methods:** Human-in-the-loop robotics experiments, Optical motion capture (Qualisys, Vicon), Metabolic analysis (Gas exchange measurement; COSMED, ViaSys), Electromyography (EMG), Electrical vestibular stimulation (EVS/SVS), Electroencephalography (EEG; TMSi), Force plate (AMTI, Kistler), Classical conditioning, Dutch research ethics proposals (METC, HREC)
- **Modeling and Simulation:** Musculoskeletal modeling (OpenSim, Scone), Multibody dynamics, State-space modeling, Optimal control, Numerical optimization (e.g., particle filter, genetic algorithm), Metabolic cost estimation, Vehicle/tire dynamics
- **Programming and Analysis:** MATLAB, LabVIEW, Python, BASH, Version control (Git, Markdown), EEGLab, Scientific computing (numerical optimization, signal processing, real-time computation), Statistics (Frequentist and Bayesian)
- **Design and Prototyping:** Mechanical Engineering, Iterative design, CAD (SolidWorks, GrabCad), 3D Printing (Cura, Ender 3), Freehand sketching
- **Scientific Communication:** Scientific writing (L^AT_EX, Word), Figure creation (Affinity Designer/Photo, Adobe Illustrator/Photoshop, Inkscape, MATLAB)
- **Project Management and Knowledge Tools:** Reference management, Obsidian, Notion, Overleaf, Course management (Brightspace, Canvas, Feedbackfruits)

ADDITIONAL INFORMATION

Languages: Dutch, English, MATLAB

Personal interests: Martial arts (Secretary for Board 30 of Delftse Budo Sport Vereniging D.S.B.V. Yoroshi, 2019/2020), Bouldering, Tinkering (3D printing, Arduino, Desktop computer), Video game physics and design
